

#REPATIKOSAM 🙌

- WRITE A JENKINS PIPELINE WHICH CONTAINS THE FOLLOWING STAGES
 - CODE : GETS THE CODE FROM GITHUB (any frontend code and Dockerfile)
 - BUILD: Build the Dockerfile to get image
 - DEPLOY : Create a container

MAKE SURE TO USE **chmod 777 `///var/run/docke.sock`** command after installing docker and jenkins on EC2 Instance.

the above command allows the permission to jenkins for creating docker containers.
